An actual keylogger is a program that monitors activity on your computer so you can discover what other users are doing on your computer when they don't exist. Keylogger keeps tracking programs that run or are closed, sites visited and compressany keystrokes, and can also record screenshots and content copied to the clipboard. Actual Keylogger Records: Applications that run and close all keystroke (recorded keystroke) all content copied to the portfolio printing activityDisk changes to make Internet connections, and all sites visitedStartup / Shut down actual keylogger operations generates: the screen captures for a specific time log files for all activitiesReports in the text and HTML actual keylogger format provides: standard and hidden operating modes all operating systems in hidden mode - even in the process listsPassword protected logs for an additional convenient interface for screen/log viewReports sent by email, FTP or local network installation and flexible interface configuration for use and powerful featuresDownload actualkeygerdownload key + crackage free version of the free-loaded unigerone spy software Key Recorder (KeyLogger or KeyStroke Recorder) is a program that works invisibly in the background, recording all keystrokes, and usually saves the results to the log file. The actual keylogger features spy software: logs all keystrokes, is a sensitive case (key stroke recorder). Makes the shots within the specified interval. Save apps running and closing. Monitors the contents of the clipboard. Records all print activity. Disk changes logs. Recording Internet connections. Registers all visited sites. Start/off recording. All information is stored in the encrypted log file. A convenient interface of log view and screenshot. Create the report in html and text format. Sends report to selected email, via FTP A local network. Works in standard and hidden mode. Hidden mode is invisible in all operating systems (in Windows NT/2000/XP/Vista/7 operations as well). Provides the opportunity to protect keylogger with password, so that no one can view the records. Fast installation, convenient and understandable interface, different set of features, flexible configuration system and virtual virtual keylogger spy software are absolutely invisible in all operating systems (in Windows NT/XP/XP/Vista/7 processes as well) and no antivirus detection software. Case-sensitive when detecting keystrokes. When viewing keystrokes, only characters can appear without displaying the pressing system keys that is more convenient. For example, if the following keys are pressed: [Shift][!][Space]Space[Space]keylogger. After checking the option to show only characters. Register search using or without case-sensitive option. For your convenience, the size limits of the text record and the screen shot size are determined separately, as the size of the screenshots usually occupies more disk space than the text file. Determine the boundaries of the contents of the portfolio. If large amounts of information are copied to the clipboard, only the selected part will be saved. Send reports to e-mail, via file transfer protocol or a local network with a flexible configuration system. Using it for educational purposes only, E-hacking4all is not responsible for all activities that have been done by this tool. Just to raise awareness about the Kloggers. password for rar file: screenshots: screenshots:
